Arm and Plenum Extraction

Arm extraction requires high volumes of air, but at much lower pressures; therefore, these cannot be operated on the same system as tip extraction. Arm extraction is very effective, but correct nozzle positioning and size is critical for optimum performance.

BENCH TOP PLENUMS

For applications that require extraction over a large area. Bench Top Plenums are an effective solution. Plenums are available in two sizes. Both include inlet grills to prevent debris from being sucked into the filter unit, and are supplied with a flexible hose and end cuffs for simple and quick connection to the high volume extraction system. Small bench top plenums are supplied with an integral balance valve.
