CATV Cable

Belden coaxial cables meet the highest standards of quality control in the industry. Because cable performance and reliability are of such critical importance to CATV sys-

DUOBOND® II/BRAID

tem, performance test procedures are strict and uncompromising. All Belden coaxial drop cables are 100% sweep tested from 5 to 450 MHz with a minimum structural return loss of 23 dB.

Duobond II plus Braid has proved to be an economical solution to many CATV installation problems—even in high-density metropolitan areas. The aluminum-polyester-aluminum foil is bonded directly to the cellular polyethylene cord and provides 100% coverage, seals out moisture and assures easier, more reliable connector installation.
