EXTERNAL SHUNTS FOR DC AMMETERS

For use with DC panel ammeters with 50 millivolt basic movements. Shunts are supplied with a 5 foot .065 ohm lead set. Calibration is adjusted for the extra resistance. Other lead lengths are available to special order.

TOROIDAL CURRENT TRANSFORMERS FOR AC AMMETERS

For use with AC panel ammeters with 5 ampere basic movements. The primary is formed by passing the primary conductor through the window in the toroid the number of times indicated in the table. Secondary leads are 2 ft. in length. One lead is white and phasing is identified in that the secondary current leaving the transformer by this lead will be in phase with a primary current entering the transformer on the side identified with a white spot.
