

RMF PRODUCTS, INC.

**MODEL 140 SERIES
BEZEL & FILTER ASSEMBLY**

Low cost bezel and filter assemblies enhance digital readouts easily, effectively and economically. Variety of sizes are available to enhance the most popular digital displays. Installs easily without tools, adhesives or hardware in any panel thickness from .040 in. to .125 in.

Installation is fast and simple; merely slide the filter into the slots in the rear of the bezel, then push the entire assembly into the panel cutout; a quick and easy operation without the use of any tools.

PANEL CUTOUT DIMENSIONS

**MODEL 142 SERIES
BEZEL & FILTER ASSEMBLIES**

142 Series bezel is designed specifically for liquid crystal displays. There are sizes available for the most popular single line and multi-line displays. The bezel is black in colour with a textured finish. The standard filter colour is clear although other colours are available. All filters have a non glare surface to make viewing easier.

Installation is very simple. The filter is first inserted into the retaining slot in the rear of the bezel. The bezel is then secured to the panel with four push-on clips (supplied). This type of mounting allows the display to be placed directly behind the filter for maximum readability.
