B52 Pedal Connectors:

We are introducing the newest connector from Abbatron G&H Plugs, the B52 Solderless Plug which is designed for quick, easy, and secure termination of your pedal board cables. This low profile connector allows you to choose which angle you need from 90 degree to straight or anywhere in between. You determine the length of the cable so you can place your pedals where you want and need them.

The B52 has a simple one piece design with a slotted set screw. Just cut the length of cable you desire, insert the ends into the connector to seat, and then screw in the set screw until almost flush. Test it and you're ready to go!

These connectors are offered in:

- The B52N6 kit which comes with 6 feet of 22 gage cable, 6 connectors and set screws, and one screw driver. Enough to assemble 3 cables.
- The B52N12 kit which comes with 12 feet of 22 gage cable, 12 connectors and set screws, and one screw driver. Enough to assemble 6 cables.
- The B52N connectors are available in bulk quantities.
- The 22 gage cable, MOJOPL, is also available in bulk quantities.

Abbatron is the premier manufacturer of high-quality hardware and connectors and has over 50 years of experience designing and manufacturing both custom and standard electronic connectors, high end audio products, components, cable assemblies, and electronic hardware. The manufacturing plant is located in Meadville, PA and offers many products that are proudly designed and manufactured here in the USA.
