Belden Infrastructure Solutions

Today's Data Center, Broadcast, AV and Security professionals must ensure that their infrastructure is highly available, scalable and flexible, while at the same time control operating expenses. These conflicting objectives have drawn attention to the performance of physical infrastructure elements, including heating and cooling, rack-level power, bandwidth and physical security management – all of which impact infrastructure availability, and therefore, mission critical applications.

Belden understands the issues you face daily – cooling, power, density and security – and can help you capitalize on these opportunities by implementing the right blend of technologies to maximize the efficiency of your enterprise in a manner that complements your system's performance requirements – today and into the future.

* Seismic certified enclosures.

** Production floor networking equipment hosting.

Engineered to meet your specific needs.

Belden has leveraged its engineering and manufacturing expertise to bring you the most reliable cable, connectivity, enclosure and active systems solutions available – with the largest selection of products and the industry's most trusted technical support and service.

This catalog of Infrastructure Solutions products reflects the same quality and reliability you've come to expect from Belden for the housing and storage of data, broadcast, security and other equipment. Engineered for optimal cable routing, ease of

installation and maximum convenience, Belden racks and enclosures have also been designed to match the unique requirements of various industries and applications.

This table will help you select the Belden rack and enclosure family that best suits your specific application. If you need a custom design for a special application, please call us for assistance. Our Cable Management teams have many years of experience in modifying and customizing enclosure designs to suit many different requirements.

Unique Offerings From Belden

Belden End-to-End Infrastructure Solutions

Whether you're considering Belden racks and enclosures for use in a Data Center, Broadcast Studio, Commercial Enterprise, Industrial Facility or other application, it's important to look at the big picture. Chances are, you're managing a dynamic environment with evolving systems, technologies, logical architectures and new business models. You need to ensure that your infrastructure is highly available, scalable and flexible, while at the same time, control your operating expenses.

Manage Conflicting Objectives

These often conflicting objectives focus attention on the performance of physical infrastructure elements, including heating and cooling, rack-level power, bandwidth and physical security management. The challenge is that these elements typically tend to work against each other. For example, as load is increased with high-density active equipment, the system's power and cooling requirements are increased, and so are energy costs. Because these issues are directly interrelated, complications can arise from each system being manufactured, installed and supported by different vendors. That's why a systems approach for cost-effectively cooling, managing use of power and optimizing use of available space is critical.

Belden Can Help

We optimize cooling, power and density opportunities because we have expertise in all three areas, offering solutions that effectively deal with all three at the rack/enclosure level.

Belden Offers:

- Airflow, power distribution and power- and climate-monitoring devices that effectively help with high-density computing environments
- High-density racks, enclosures, copper and optical fiber cabling system components and cable management solutions that enable maximum bandwidth and availability in an efficient footprint for better air flow and optimal use of real estate

Advantages of Belden End-to-End Infrastructure Solutions

- Greater convenience of entire solution from a single source
- Assurance that all components work together
- The most reliable product performance in the industry
- Dependable service and superior support
- The most trusted name in the industry with a large global sales and distribution network

Delivering **complete infrastructure solutions** to maximize efficiencies.

Unique Offerings From Belden

Data Center Ready Solutions

Data Centers require adequate planning to address equipment hosting, power and thermal management. Once active equipment has been chosen, the next step is to make sure you have the infrastructure to support the availability and performance your active equipment needs to deliver. Belden's dedicated engineering and manufacturing resources will design, build and deliver enclosures that support and optimize the performance of your selected active equipment. The result is a turnkey solution — from design to roll-out — on the Data Center floor. This service takes 100% of the guesswork out of the design process, making it ideal for Data Center designers, consultants, system integrators, facility planners and managers.

Optimized Integration

- Single-source physical infrastructure solutions designed to work together to support the optimal performance of the selected active equipment
- Pre-configured equipment hosting solution with optimal mix of fiber and copper connectivity, cable managers and power distribution units (PDUs), along with airflow management for heat containment

Reduction of Deployment Time and Cost

- Pre-configured, design-validated and labeled enclosures ready to receive servers or switches at the specific data center location (as per the assigned label)
- Use of best-in-class pre-terminated fiber and copper systems, smart PDUs and active heat containment for fast deployment and reduced labor costs

Streamlined Logistics

- Simplified coordination of all equipment hosting-related tasks — all passive components arrive pre-installed
- Designs can be templated, saved, duplicated and modified for future use

Ease of Standardization

- Single part number ordering for fully configured solution enables easy standardization, specification, ordering and simplified supply-chain hurdles
- Control of deployment methodology across single or multiple sites

Greening of Deployment

- Configured components are pre-installed to specific requirements, eliminating the need for individual packaging, thereby reducing waste disposal of cartons, boxes and plastics
- Consolidated shipping allows efficient packaging and a reduction in the CO₂ footprint

Contact Belden Today

Belden engineers are ready to work with you to design your Data Center Ready Solution. Contact us now to start the process of delivering the optimal support environment for your active equipment.

Designing the **optimal support environment** for your active equipment.

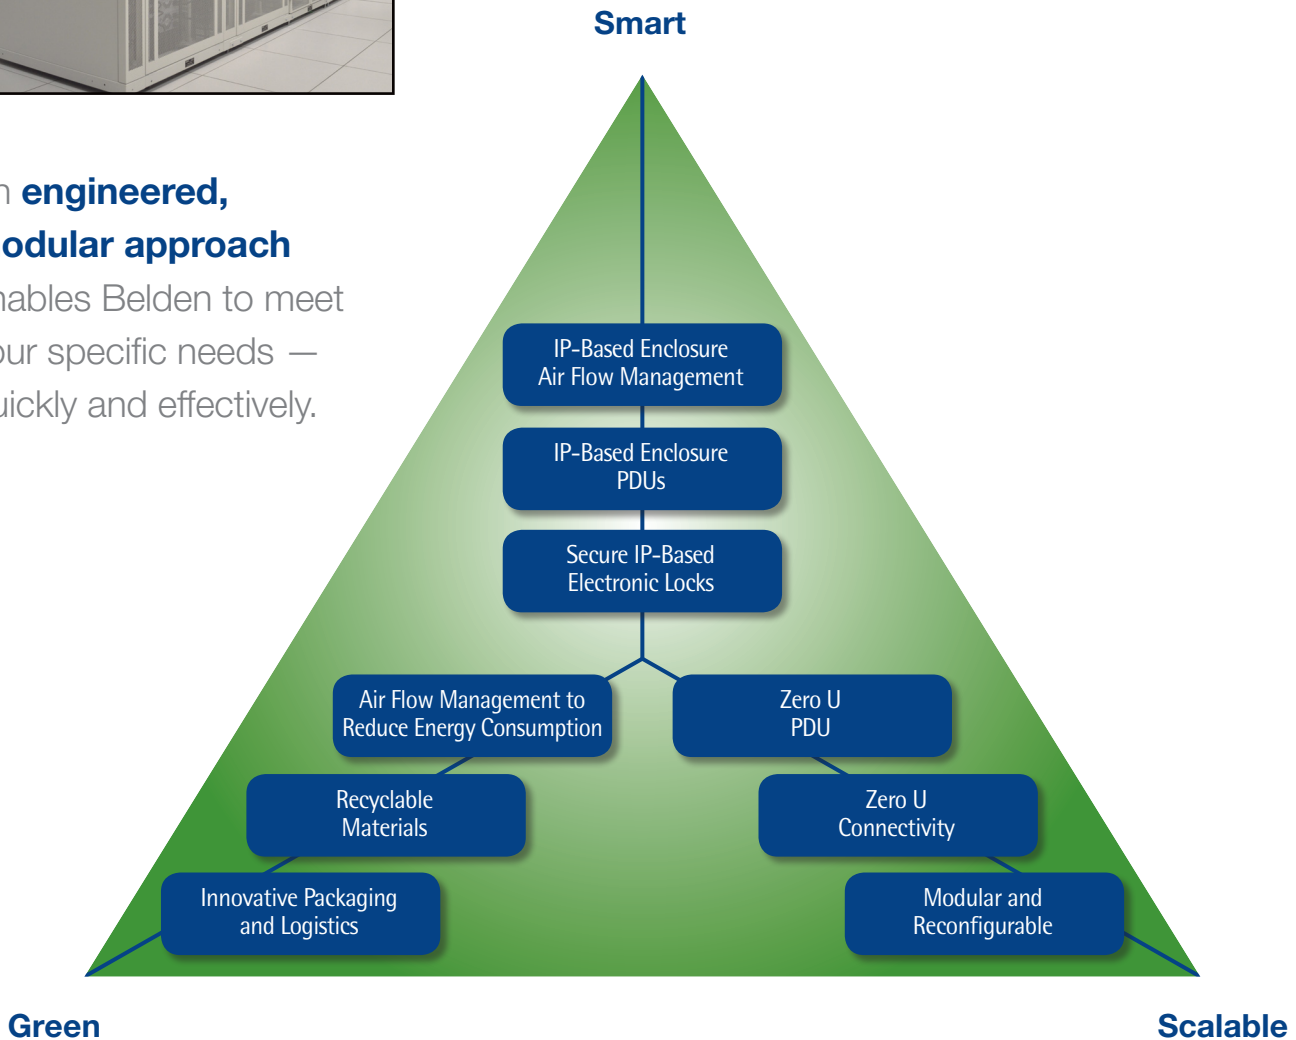

World-Class Enclosures

Belden's broad portfolio of enclosures for hosting servers, switch and networking equipment in Enterprise, Data Center and Broadcast applications is based on proven concepts and products. Each enclosure is built to meet specific application and customer needs. The modular approach and pre-configured capabilities of our enclosures enable fast installation of IT equipment with cable and connectivity management, while providing options for bandwidth scalability, secure features and power and air-flow management.

Key Features and Benefits of structural elements, security components, air flow dynamics and cable and power management are depicted in the value triangle below.

An **engineered, modular approach** enables Belden to meet your specific needs — quickly and effectively.

Faster.
Easier.
Better.

Features and Benefits of Belden Enclosures

Load Capacity

As Data Centers increase in density and bandwidth with blade servers and high port count switches, the need for higher load capacity enclosures is a growing trend. Most Belden enclosures have welded frame construction to accommodate static loads up to 3,000 lbs

To accommodate flexibility in data centers during the initial installation, the enclosures come with casters rated to dynamic loads up to 2,800 lbs

Modularity

A modular enclosure design accommodates frame widths from 22" to 40", heights from 42RU to 52RU and depths from 30" to 48" — all while ensuring cable management, power components and air flow management work seamlessly across the different sizes. This modular approach enables field-upgradable changes to chimney containment systems, PDUs and cable management.

Adaptability

A selection of vertical and horizontal cable managers capable of handling a wide range of cable and connectivity density can be accommodated in the enclosures. The doors are field reversible with lift-off hinges.

In addition, the doors, top and bottom panels are configurable based on heat management needs for hot-aisle/cold-aisle configuration or chimney containment.

Security and Intelligence

Enclosures can be configured with a key access or smart access system with lock control at the enclosure level or end-of-row POD level.

IP-based air flow management and environmental monitoring-alarming systems and sensors for maximum availability.

Wide selection of smart PDUs with power monitoring and switching options for optimized power management and PUE measurement.

Scalability

With Zero U mounting options, fiber and copper connectivity in the enclosures is scalable to address multiple-generation connectivity needs for servers and switches. Similarly, a broad portfolio of rack PDU offerings, from basic to 3-phase remote switched products, enables enclosures to support power requirements of multiple-generation active IT gear.

Environmental and Seismic

Belden's seismic enclosures are designed to pass Zone 4 Telcordia and/or NEB requirements in seismic zones, thus offering a stable working base for servers and switches. Similarly, the NEMA enclosures can accommodate factory floor or other harsh-environment equipment hosting requirements.

High Capacity Hosting

- Door designed to provide low resistance to air flow passage.
- Use of hexagonal 78% open perforated patterns
- Door design to maximize perforated surface

Customized Racks and Enclosures to Meet the Unique Needs of Your Installation

In-House Design, Prototyping and Manufacturing

Belden's in-house engineering and state-of-the-art sheet-metal fabrication, powder-coating and silk-screening capabilities enables racks and enclosures production from raw materials to finished goods. This gives unequalled agility to quickly develop – and deliver – technically sound, cost-competitive and compromise-free custom solutions to meet the challenges of your specific project.

Cellular-Based Manufacturing for Fast, Flexible Service

- Customer communicates project needs, goals and challenges directly to Belden design team
- Customization available for quantities as low as ten enclosures
- Quick-turnaround service – only 4–6 weeks from concept to delivery

Varying Levels of Customization to Meet Your Needs

- Custom paint color matching and silk-screened logos
- Ability to modify standard enclosure frame sizes
- Complete design/build of project-specific enclosures in steel, aluminum or stainless steel

Value Added Services Typically Performed for Customers

- NEMA-style enclosures for industrial networking and outdoor networking applications
- Kitting of racks or enclosures equipped with Belden and/or other manufacturers' components to enable quick and easy logistics and deployment in applications like retail POS
- Integration of power, cable management, connectivity, cooling and climate monitoring systems into enclosures
- Enclosures designed for heat containment with ducting to support high-bandwidth blade servers and switches
- Rack power distribution unit (PDU) customization for specific numbers of receptacles, single- and three-phase power and special overlays to enhance user experience
- Chimney containment customization to accommodate varying ceiling heights with options of passive or active sensors and fan-based units

Unequaled agility to develop and deliver **compromise-free custom solutions.**

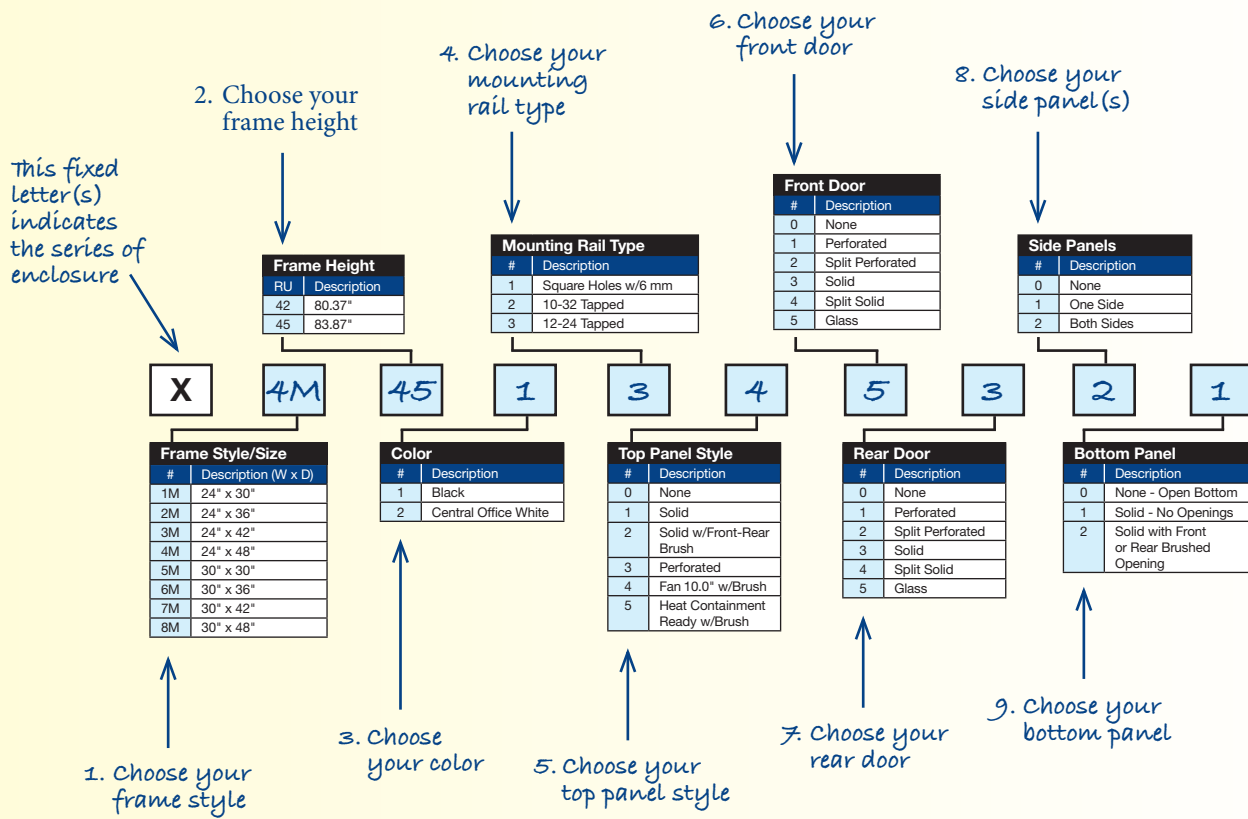

Faster.
Easier.
Better.

How to Use the Ordering Matrix

Building a SmartPart Number

There are *SmartPart* ordering matrixes throughout this catalog that allow you to build part numbers for enclosures, options and accessories to meet your individual specifications. To build a part number, you simply choose from the options listed in the light blue boxes. The example shown below is for an enclosure.

Final part number built to your specifications

X4M451345321

By looking at the part number, you can tell that it's an X Series enclosure that's 24"W x 48"D x 83.87"H (45RU). It's black with 12-24 tapped mounting rails. The top panel has a 10" fan with brush for guiding cables into the enclosure. It also has a glass front door, a solid rear door, side panels on each side and a solid bottom panel with no openings.

Specific Solutions for a Wide Array of Applications

As the premier supplier of cable and connectivity systems, Belden has leveraged its networking skills, engineering expertise and end-user experience to provide a broad portfolio of enclosures and racks that meet security, availability and efficiency challenges.

With the X Series (XM, XS, XN), Belden offers an enclosure solution that seamlessly integrates power distribution, airflow containment and management, networking connectivity and cable management to provide optimized hosting conditions for today's servers and switches. Designed to work seamlessly with Belden's market-leading fiber and copper connectivity solutions, the X Series vertical and horizontal cable management system supports high cabling/connectivity density, while providing ease of moves, adds and changes.

Shipped fully assembled and configured to exact end-user requirements, the X Series modular design includes a myriad of options for doors, side panels, airflow through passive chimneys or active AEHC units and PDU mounting for easy installation and reconfiguration. Single part number ordering permits ease of standardization and logistics.

Belden XS (Server) and XN (Switch) enclosures reduce Data Center operational costs by:

- Offering a modular and scalable system that adapts to changing requirements for hosting multiple generations of IT equipment
- Enabling seamless heat containment integration for reduced energy consumption
- Providing ganging compatibility for flexible arrangement in distributed, end-of-row or in-row switching environments
- Featuring a new simplistic, durable yet light-weight door design with an integrated punched hex pattern that offers an opening of 78% for superior air flow and a patent-pending hinge for maximum security and flexibility with a dual 270-degree swing (legacy doors available upon request).

Seamlessly integrate power distribution, air-flow containment and management, networking connectivity and **cable management into one comprehensive enclosure solution** — optimizing Data Center hosting conditions for servers and switches.

XM Series – Multi-Media Enclosures

Value-minded but versatile and feature-rich

Applications

With multiple enclosure footprints to better suit your space and application needs, the XM Series is ideal for Security, Broadband, Enterprise Networking and Data Center applications. Its basic yet highly functional construction makes for a technically sound and economical enclosure system.

Design and Structural Features

- Perforated Door Mesh Opening: 78% (legacy 63% door available upon request)
- Patent-pending Secure Door Hinge: Dual 270-degree swing prevents aisle blocking for end-of-row enclosures
- Frame Construction: Welded 16 and 14 gauge
- Mounting Rails Construction: 12 gauge, marked RU, RU 1 is at bottom of enclosure
- Static Load Capacity: 2,500 lbs
- Capacity on Casters: 1,080 lbs with regular capacity casters, 2,000 lbs with high-capacity casters
- EIA 310 Compliant: 19" mounting standard with optional 23" mount for 30" wide enclosures
- Vertical Cable Management Options
(See pages 20–21 for X Series Enclosure Accessories)
- Horizontal Cable Management Options
(See page 65 for Accessories)
- Tool-Less PDUs Mounting Options
(See pages 20, 75)
- Heat Containment Options
(See pages 31–34)
- Engineered and made in the USA

Ordering Matrix for XM Series

Part number example:

X7M451315221

30"x42"x45RU black frame with casters and levelers, 12-24 tapped rails, solid top panel, glass front door with lock handle, split perforated rear door with lock handle, two side panels with lock, solid bottom.

Notes:

- 1) Frame includes casters, levelers, ganging hardware, grounding studs in frame base front/rear.
- 2) Other colors and silk screening options available for volume orders.
- 3) Includes 2 pair of 19" mount EIA rails (marked RU, 1 bottom) with mounting hardware (qty = 50). 6 mm hardware standard with square rails.
- 4) Default front rail position 3.0" from enclosure face and 24" between rails for 30" and 36" deep, 30" between rails for 42" and 48" deep.
- 5) Custom top panel available for volume orders.
- 6) Fan top panel included, 10" dia., 550 CFM fan (120V).
- 7) Heat containment top (42" and 48" deep only) ready to accept passive or active containment chimney.
- 8) Front and rear doors include latching handle with key lock and bonding strap.
- 9) Single door swings left to right and is field reversible
- 10) Side panel includes key lock and bonding strap. Each panel adds 0.63" to enclosure width.
- 11) Separator panels for use between ganged enclosures (do not add width) are available (refer to component section.)
- 12) Bottom brush panel can be rotated 180° for choice of front or rear brush entry.
- 13) For 24"W single door with (4) 7" dia. fans (940 CFM total). For 30"W split doors (8) 7" dia. fans (1880 CFM total).

XM Series – Individual Components Ordering Options

Enclosure Frame

No rails, levelers and casters.

EIA Mounting Rails

Includes two pair of rails and mounting hardware (50). Default hardware for cage nut style rails is M6. Black only. EIA 23" mount available on custom request for 30" wide enclosure.

Construction

- Welded 14-gauge frame and 11-gauge mounting rails support a static load of 3,000 pounds (2,250 pounds with casters) to host a full rack of blade servers
- Rail seal and adaptive containment eliminate hot spots and provide energy efficiency, monitoring and alarming
- Designed and tested for use with Belden Fiber and Copper Networking solutions

Ease of Installation

- Modular design with options on doors, side panels, air flow management, cable management and PDU monitoring, offering ease of installation plus scalability
- Doors can be easily removed and oriented for left or right swing to suit application needs.
- Highly integrated and shipped fully assembled with power, air flow, connectivity and cable management
- Optimal physical density and networking bandwidth for ease of moves, adds and changes

Cable and Air-Flow Management

- Open frame design with no center rail support strut maximizes usable space, eases cable routing and supports Zero U connectivity in both 24" and 30" wide designs
- Integrated punched hex pattern is 78% open for low-resistance airflow through doors (legacy doors available upon request)
- Front rail seals enable physical separation of supply and return air for optimized hot/cold aisle and containment deployment
- 42" and 48" deep versions easily host deep equipment chassis with rear space for power and cable management
- Available in 42, 45 and 48RU for a variety of hosting requirements

Containment and Power Distribution

- Complete line up of IP-based power distribution units (PDUs) with available monitoring, alarming and receptacle-level switching
- Enables up to 30kW per enclosure with Belden's innovative passive and adaptive (AEHC) chimney-based containment systems

Aesthetics

- Designed and manufactured in the USA and fully customizable to meet specific equipment hosting challenges
- Available in Central Office white for improved internal visibility and reduced lighting needs
- 270-degree door swing means doors won't block aisles on end-of-row enclosures (legacy doors available upon request)

Faster.
Easier.
Better.

XS Series – Server Enclosures (continued)

XS Series Specifications

- Perforated Door Mesh Opening: 78%
- Patent-pending Hinge Design: Secure, Dual 270-degree Swing
- Frame Construction: Welded 14 gauge
- Mounting Rails Construction: 11 gauge, marked RU, RU 1 is at bottom of enclosure
- Static Load Capacity: 3,000 lbs
- Capacity on Casters: 1,080 lbs with regular capacity casters, 2,250 lbs with high capacity casters
- EIA 310 Compliant: 19" mounting
- Vertical Cable Management Options (See pages 20–21 for X Series Enclosure Accessories)
- Horizontal Cable Management Options (See page 65 for Accessories)
- Zero U – Vertical Patch Panel (See page 21)
- Tool Less PDUs Mounting Options (See pages 20, 75)
- Heat Containment Options (See pages 31–34)
- Engineered and made in the USA

Ordering Matrix for XS Series

Part number example:

X3S451311221

30"x42"x45RU, black frame with casters and levelers, 12-24 tapped rails, solid top, perforated front door with lock handle, split perforated rear door with locking handle, both side panels with locks, solid bottom.

Notes:

- 1) Frame includes levelers, ganging hardware, grounding studs in frame base front and rear.
- 2) Other colors and silk screening options available for volume orders.
- 3) Includes 2 pair of 19" mount EIA rails (marked RU, 1 at bottom) with mounting hardware (qty = 50), 6 mm hardware standard with square rails.
- 4) Default front rail position 3.81" from enclosure face and 30" between front and rear rails.
- 5) Custom top panel available for volume orders.
- 6) Fan top panel included, 10" dia., 550 CFM fan (120V).
- 7) Style 5 top ready to accept passive or active containment chimney.
- 8) Front and rear doors include latching handle with key lock and bonding strap.
- 9) Single door swings left to right and is field reversible.
- 10) For 24"W single door with (4) 7" dia. fans (940 CFM total), For 30"W split doors (8) 7" dia. fans (1880 CFM total).
- 11) Side/separator panel includes two half-height panels with key lock and bounding strap. Panel does not add width to enclosure.
- 12) Side/separator panels with brushed or perforated rear available from component selection.
- 13) Bottom brush panel can be rotated 180° for choice of front or rear brush entry.

XS Series – Individual Components Ordering Options

Top Panel Sections

Small section 5 and 6 only applicable to 48" deep enclosure. No panel required for chimney containment on 24" wide enclosure.

Side or Separator Panel

Side or Separator panel mounted (default position) on right side when facing enclosure front. Solid panel as lock, perforated and brushed side panel does not have lock. Panel part # includes bottom and top panels.

Faster.
Easier.
Better.

XS Series – Options (continued)

EIA Mounting Rails

Includes two pair of rails and mounting hardware (50).
Default hardware for cage nut style rails is M6.

XS			RLS	
Frame Height	Frame Width	Mounting Rail Type		
42 42RU	24 24"	CN6	EIA Rail 6 mm Cage Nut	
45 45RU	30 30"	1032	EIA Rail 10-32 tap	
48 48RU		1224	EIA Rail 12-24 tap	

Door with Latch Handle

Fan door (F) only applicable to 24" wide. Split fan door (SF) only applicable to 30" wide.

XS				D	
Frame Width	Frame Height	Door Style		Color

Belden's XM and XS Series Enclosures — Cable Management and Zero U Patching

Belden's XM and XS Series enclosures and cable management components were specifically designed for integration with the Belden IBDN copper and fiber networking system for a true end-to-end solution.

The combination of Belden's extensive cable and connectivity design knowledge and years of interaction with installers and system designers has enabled us to offer:

Features

- A broad selection of modular vertical and horizontal cable managers in configurations that meet your exact requirement for compromise-free hosting
- Flexibility to meet customer needs requiring low to extremely high networking/hosting density
- Modular cable management components and enclosures that protect your investment because they can be reconfigured to meet evolving hosting requirements (typical enclosure system will play host to 3-5 generation active equipment)
- Vertical managers that enable ease of moves, adds and changes, making management of your network fast and precise while still allowing you to maintain an organized, consistent look
- A cable management system designed to maintain proper cable bend radius and minimal tension through the use of support fingers, an attachment point for cable bundles and a slack management spool, ensuring maximum bandwidth from your copper and fiber networks

See page 65 for Horizontal Cable Management options.

Vertical Lacing/PDU Mounting Panel*

- Manager panel 7" and 3.5" wide
- Mounts on rail struts for depth adjustability
- Panels can be mounted side by side to create manager surface
- Tool-less PDU mounting
- Lacing of cable bundles
- Attachment of ring managers
- Attachment of slack management spools
- Attachment of quick mount base

*Lacing-PDU mounting panels (p.21 and 75) are not included with the enclosures or the PDU's and need to be ordered separately. PDU's/panels uses tool less "button" style mounting.

Box and Finger Style Vertical Managers

- Mounts on rail struts for depth adjustability
- Compatible with both 24" and 30" wide enclosures
- Can be used in enclosure front and rear
- Includes doors to hide cables and provide organized look
- Vertical manager can be oriented two different ways to optimize cable routing

Box Style Features:

- 4" wide x 3" deep for 12 sq. in. of cross sectional area
- For low- and medium-density applications
- Oblong opening allows cable routing into the manager
- Low-cost vertical manager option

Finger Style Features:

- 5.5" wide x 3.6" deep for 20 sq. in. of cross sectional area
- For medium- and high-density applications
- Management fingers align with mounting rail RU
- Finger allows for cable support and bend radius control
- Oblong opening allows cable routing into the manager

Zero U – Vertical Patch Panel and Connectivity

Features

- Attach to mounting rails
- 24" wide enclosure can accept up to four x 7 positions vertical patch panels
- 30" wide enclosure can accept up to four x 14 positions vertical patch panels
- Vertical patch panels are fully compatible with Belden copper and fiber connectivity (FX UHD, FX Ultra Frames and Cassettes)

Description	Belden Part Number
-------------	--------------------

Zero U – Vertical Patch Panel and Connectivity

Vertical Patch Panel (7 positions), Compatible with 24" and 30" Wide XS Enclosures	XZUK01
Vertical Patch Panel (14 positions), Compatible with 30" Wide XS Enclosures	XZUK02
FXUHD KeyConnect Frame Blank	FFZH00BB
FXUHD KeyConnect Frame 6-Port, Black (Empty)	FFZH06KC
FXUHD KeyConnect Frame 8-Port, Black (Empty)	FFZH08KC
10GX KeyConnect Couplers for Vertical Mount Patch Panel, 8-Port, Black	AX105366
CAT6+ KeyConnect Couplers for Vertical Mount Patch Panel, 8-Port, Black	AX105367

Belden Zero U - Vertical patch panel allows for optimal use of mounting space into XS Series enclosures by providing high-density connectivity options along the equipment mounting rails.

XN Series – Networking and Switch Enclosures

Designed to handle dense patching fields while ensuring proper air flow

XN Series Frame Only

XN Series with 6" end-of-row extension

Features

- Modular enclosure designed for networking (cross connect) and switch hosting into Data Centers
- 30" wide enclosure, 42" or 48" deep with 42, 45 and 48 RU height options
- Unique open frame construction allows structural uprights to be positioned inside the frame, resulting in a corner post-free structure, enabling unobstructed access to front and rear vertical managers
- 6" enclosure extension can be mounted on each side of the 30" frame, resulting in a 42" frame for hosting of side-to-side venting switches
- Dual 270-degree swing prevents aisle blocking for end-of-row enclosures and optimizes access to right and left cable manager
- Doors feature 78% opened integrated hexagonal mesh for low air resistance and optimal cooling of the hosted gears (legacy doors available upon request)
- Integrated front and rear finger-style vertical managers
- Modular front-to-rear cable management options
- Vertical (Zero U) patch panel options, for integration of Belden pre-terminated copper and fiber connectivity products
- Front rail air seal and baffle for high level of separation between cold-supply air and hot-return air, ideal for high-density hosting
- Available in black and central office white

Containment Ready

- Fully compatible with passive or active (AEHC) chimney containment, up to 30kW of hosting capacity

Power Ready

- XN enclosures are ready to host high-end power distribution units from Belden's line up of smart PDUs

Switch Ready

- Switch-specific configuration includes air director for side-to-side venting switches (Ex: Cisco Catalyst 6509, Nexus 7018)

XN Series — Networking and Switch Enclosures (continued)

XN Series Specifications

- Frame Construction: Welded 14 and 12 gauge
- Static Load Capacity: 3,000 lbs
- Capacity on Casters: 2,250 lbs with high-capacity casters
- Engineered and made in the USA

XN enclosure frames
30"W x 48"D x 45RU

6" between enclosure extension includes front and rear removable panels

6" end-of-row extension includes front and rear removable panels and side panel

78% open hex patterned door with patent-pending hinge design that offers superior security and a dual 270-degree swing

Optional air intake/exhaust duct for hosting of side-to-side venting switches

PDU mounting provision for easy integration of Belden high capacity smart PDUs

Corner-free frame allows for optimal access to integrated front and rear vertical managers

Ganged XN frames with end-of-row 6" extension and between enclosure 6" extension (rear view)

XN Series — Switch-Ready Configured Enclosures

Belden will configure enclosures to your exact requirements. The following allows seamless hosting of switches from CISCO's Catalyst and Nexus Series. Please contact your Belden sales representative to discuss your specific needs.

Item	Part #	Frame Size			Color*	Rails	Top Panel	Doors		Lacing/PDU Panel	Air Director Duct	6" Frame Ext.
		Width	Depth	Height				Front	Rear

10	X4N45-C7018102	42	48	45RU	Black	Square Rails	Brush+Chimney Ready	Perf.	Split Solid	2 Rear	7018	Left/Right Side

* For Central Office White color, replace 1 with 2 (ex: X4N45-C7018201).

Notes:

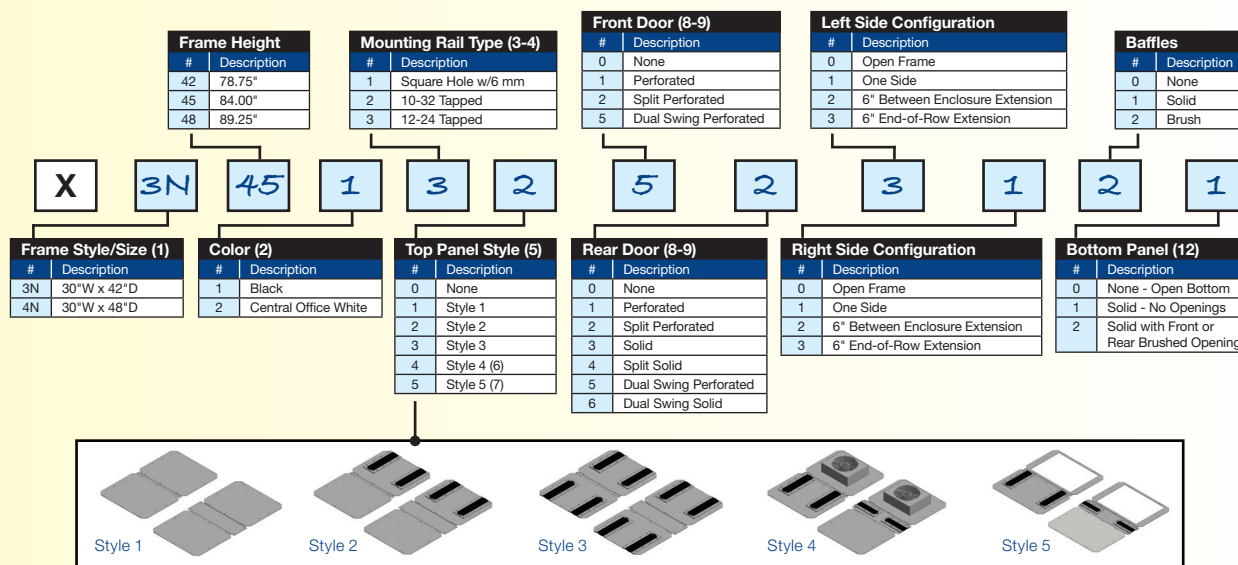

- Switch-specific configuration includes all enclosure components needed to host given switch.
- Configuration 3 and 4 allows for hosting of two CISCO Catalyst Series 6509 per enclosure.
- Mounting Rails Construction: 11 gauge, marked RU, RU 1 is at bottom of enclosure.
- Power Distribution Units (PDUs) are not included in above configurations; refer to PDUs Section of the catalog (pgs. 69–76) for options.
- For "chimney-ready" configuration, refer to Containment Section of the catalog (pgs. 31–34) for chimney and accessories options.
- Bottom panel with rear brushes is included.
- Side panels (left and right) is included.
- 6" extension frame includes extension front and rear panels.
- Solid rear panel for chimney ready enclosures.

Ordering Matrix for XN Series

Part number example:

X3N45132523121

30"x42"x45RU black frame with casters and levelers, 12-24 tapped rails, top panel with rear brush, perforated front door with dual lock handle, split perforated rear door with lock handle, 6" end-of-row extension left, side panel on right, brushed baffles, solid bottom.

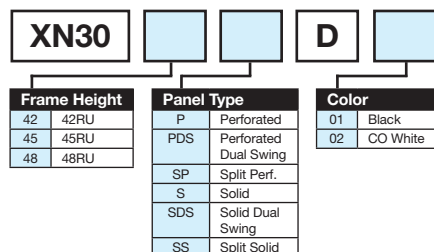

Notes:

- 1) Frame includes casters, levelers, ganging hardware, grounding studs in frame base front and rear.
- 2) Other colors and silk screening options available for volume orders.
- 3) Includes 2 pair of 19" mount EIA rails (marked RU, 1 at bottom) with mounting hardware (qty = 50). 6 mm hardware standard with square rails.
- 4) Default front rail position 3.81" from enclosure face and 30" between front and rear rails.
- 5) Custom top panel available for volume orders.
- 6) Fan top panel includes 10" dia. 550 CFM fan (120V).
- 7) Style 5 top panel to accept passive or active containment chimney.
- 8) Front and rear doors include latching handle with key lock and bonding strap.
- 9) Single door swings left to right and is field reversible.
- 10) Side panel includes two half-height panels with key lock and bounding strap. Panel does not add width to enclosure.
- 11) Side panels with brushes or perforated rear available from component selection.
- 12) Bottom brush panel can be rotated 180° for choice of front or rear brush entry.

XN Series – Individual Components Ordering Options

Door with Latch Lock Handle

When switching doors out, door adapter comes with door.

Side Extension Doors

Side Extension Panel with lock. Includes one panel (can be use front or rear).

Top Panel Sections

Small section 5 and 6 only applicable to 48" deep enclosures. No panel required for chimney containment on enclosure.

Faster.
Easier.
Better.

XN Series – Options (continued)

Enclosure Frame

No rails, levelers, and casters.

XSS Series — Server Enclosure, XSN Series — Networking Switch Enclosure

Certified to Seismic Zone 4 for mission-critical Data Centers

Applications

Belden's seismic enclosures feature a robust steel frame for hosting servers, switches and network components in earthquake zones. Certified to Seismic Zone 4 requirements, these enclosures have passed vibration and shock testing per GR-063-CORE Network Equipment Building System (NEBS) Requirements with no structural damage in a certified lab.

Design and Structural Features

- Welded steel frame construction reinforced with a heavy gauge steel sub-frame for extra rigidity
- Highly perforated doors with stiffener channels ensure sturdiness while reducing risk of equipment damage during seismic events
- Adjustable EIA mounting rails support a 2,000 lb static load under normal operating conditions
- Finger-style vertical managers with brushed cable pass throughs enable front-to-rear routing while maintaining supply-return air sealing properties
- Compatible with passive and active chimney-based containment solutions
- Pre-configured switch enclosures with cable management, air baffles, intake and exhaust duct (for side-to-side venting) and power distribution units (PDUs) to host CISCO Catalyst 6000 and Nexus 7000 Series switches
- Offered in standard colors of black and Central Office white
- Integral anchoring floor mount locations*

*Belden recommends the use of a qualified contractor for the installation of seismic enclosures as per the local, state and federal building code requirements.

XSS and XSN Series Specifications

- Perforated door mesh opening: 78%
- Frame construction: 16-, 12- and 11-gauge welded steel
- Mounting rail construction: 12-gauge, marked RU, RU 1 is at bottom of enclosure
- Static load capacity: 2,000 lbs
- Static load capacity (seismic): 1,000 lbs
- Capacity on casters: 1,080 lbs (regular capacity), 2,000 lbs (high-capacity)
- Seismic certification: Zone 4 NEBS GR-063-CORE
- EIA 310 compliant: 19" mount equipment
- Horizontal Cable Management Options (See page 65 for Accessories)
- Heat Containment Options (See pages 31-34)

* For Central Office White color, replace 1 with 2 (ex: X1SS-C2001, X1SN-C70102001).

Notes:

All configured enclosures include one Side Panel and one Bottom Panel with Brush.

Switch-specific configuration includes all enclosure components needed to host given switch.

Power Distribution Units (PDUs) are not included in above configurations, refer to PDUs Section of the catalog (pgs. 69–76) for options.

Configured seismic enclosures include front rail air seal kit.

For "chimney-ready" configuration, refer to Containment Section of the catalog (pgs. 31–34) for chimney and accessories options.

Ordering Matrix for Seismic Server Enclosures (XSS)

Part number example:

X2SS441211222

XSS Enclosure, 30"Wx48"D frame, 44RU, Black, 10-32 tapped rear rails, solid top panel, perforated front door, split perforated rear door, 2 side panels, bottom panel with brush opening.

Notes:

- Enclosure dimension (measured without doors).
- Enclosure construction: Welded steel, ganging hardware, grounding studs in frame base front and rear.
- Enclosure static load capacity is 2,000 lbs, Enclosure seismic load capacity is 1,000 lbs; BELLCORE GR-63-CORE, Section 5.4.1 Certification.
- Custom top panel available on request for volume orders.
- 30" wide frame is provided with six top brush openings for networking and power cable entry.
- 11 AWG mounting rails provide standard 19" rack spacing to EIA-310-D requirements.
- Equipment mounting hardware (50) included with rails (4).
- Each EIA Rail has numerical marking for each rack unit (starting at unit 1 at bottom).
- Doors are surface mounted, reversible and provisioned with "swing handle" hardware, allowing changing of locksets.
- Split doors only available on 30" wide frame, with three-point latching "swing handle" hardware to facilitate change of lock set.

XSS Series – Options and Accessories

EIA Mounting Rails

Includes two pair of rails and mounting hardware (50). Default hardware for square hole style rails is M6.

Side or Separator Panel

Includes one side panel. Seismic panel provisioned to be bolted to enclosure.

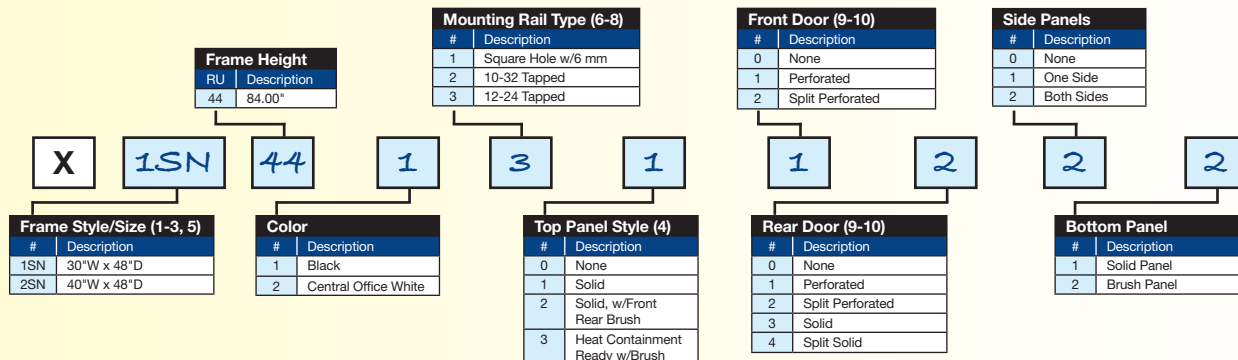

Description	Belden Part Number
Front Rail Air Seal Kit (with side air blockers)	
Front Rail Air Seal Kit, 44RU, 24" Wide, Black	XSS4424RSK01

Heat Containment Systems

Aisle and Enclosure Containment Systems

Containment Overview

A major challenge faced by data center managers today is ensuring that cooling systems do not fail and continue to provide uninterrupted cool air to equipment, especially in high-density data center environments with advanced virtualized equipment that can reach exhaust air temperatures in excess of 125° F. Most data centers that use a standard cold/hot aisle approach are oversupplied with cold air at a ratio of 2 to 2.5 (volume of cold air supplied to volume consumed by computing equipment). With cooling representing 30-40% of total operational costs for a typical data center, containment solutions present a strong ROI potential. A standard cold/hot aisle approach can also lead to hot spots that cause equipment overheating and failures, further resulting in higher operating costs.

Containment is an industry proven method of eliminating cold air bypass and the mixing of hot and cold air that allows for optimal use of available cooling capacity for overall lower operating costs. With containment, hot exhaust air from equipment is directed to CRAC units either through aisle containment systems for groups of cabinets or through active or passive chimneys at the cabinet level. This increases the differential between the inlet and outlet temperatures of CRAC units, significantly improving overall cooling system efficiency and eliminating the need to oversupply cold air. Creating separation between the hot return air and cold supply air also allows for potentially raising the supply air temperature while maintaining stable intake temperature for networking equipment, providing a more efficient, reliable and hot spot-free computing space. The containment approach easily handles the high-temperature exhaust air from advanced data processing equipment, allowing data centers to host more equipment while lowering energy consumption and total operating costs.

Belden's complete line of containment options range from the enclosure to the cold/hot aisle, offering customers the greatest flexibility for upgrading, designing and implementing a tailored solution that fits their specific data center needs in both "brownfield" or "greenfield" applications. Based on computing load, cabinet layout and computing space specifications, Belden engineers can recommend and design containment solutions that will optimize availability, efficiency and hosting capacity.

- Eliminates bypass air and air recirculation
 - Reduces or eliminates cold air oversupply (2.5 to <1.2)
 - Maximizes hosting density for up to 30kW per enclosure without precision cooling
 - Increases supply air temperature (better use of economizer loop, 8–10°)
 - Increases return air temperature for better CRAC efficiency
- Reduces cooling cost by 30–50% over traditional hot/cold aisle deployment
- Creates a high level of separation between supply and return air
- Eliminates hot spots for increased IT equipment availability

Aisle Containment

Belden's Aisle Containment solutions eliminate mixing of hot and cold air in data center environments to maximize energy efficiency and lower operating costs. Our aisle containment systems are vendor agnostic, featuring innovative transparent panels that are lightweight and easily attached horizontally or vertically to data center cabinets using a universal rail system. The panels are field modifiable to meet varying height and space requirements between rows of cabinets and from the top of the cabinets to the ceiling. The aisle containment systems can also interact with smoke or fire alarm systems to ensure proper operation of critical fire suppression and safety systems.

Solutions offered are for both hot and cold aisle containment system.

Vertical Containment

Vertical panels direct hot return air to overhead return plenum, eliminating mixing and improving overall operating efficiency of perimeter CRAC units. Using a fully ducted cold air delivery system with vertical panels also allows for cold air to be placed directly into the cold aisle, eliminating the need to use the underfloor space for supply air.

Horizontal Containment

For raised-floor environments with overhead obstructions or no ceiling plenum, non-ducted panels form a roof to trap cold air, enabling higher supply temperatures and maximizing available cooling. This design can also be used for data centers utilizing in-row cooling solutions.

Aisle Doors

Belden offers both swinging and sliding door options for the end of the row.

Notes

- Enter the end of row cabinet for mounting door, (will have to know top and side attachment points of customer cabinet)
- Enter cabinet pod type, cold air or hot air containment
- Enter ceiling height and (cabinet height (3 options))
- Enter aisle length or custom width in inches
- Enter fan or chimney adapter, or AEHC Heat Containment (Chimney sold separately)
- Enter only 1 number 0 - 9 (there are 2 columns)
- Enter aisle width
- Enter door type, sliding or swing, must enter cabinet end of row type for mounting of doors
- Custom colors available on request
- Pods will all come with solid horizontal panels unless using (option 1)
- There may have to be modifications to customer cabinets at location

Heat Containment Systems (continued)

Passive and Adaptive Enclosure Heat Containment (AEHC) System

AEHC chimney shown here in through-the-ceiling version

Passive chimney shown here in adjustable and against-the-ceiling version

AEHC chassis (23.5"Wx16.9"Dx11.5"H) host the fans and controller

Example of both Passive and Active Chimney Systems

Containment Enclosures

- Designed for chimney containment, Belden XM, XS, XSS-XSN Seismic and XN Series enclosures feature sealing front mounting rails that separate cold supply air from hot return
- 42" or 48" deep enclosures are recommended for optimal chimney containment performance
- Gasketed solid rear door options and brushed cable entries prevent hot return air from leaking back into computing space
- All X Series enclosures can be equipped with passive or active chimneys

Passive and Active Chimney Systems

- Active system can support up to 30kW per enclosure for today's extremely high heat loads
- Passive systems rely on the effectiveness of server fans, combined with pressure differential between the enclosure and return spaces
- Passive system capacity peaks around 10kW (but can be higher) and varies based on chimney length, position in relation to CRAC, return plenum pressure and exhaust air temperature
- Passive and active chimneys are available as through-ceiling chimneys that protrude approximately 2" into the return plenum, and against-the-ceiling chimneys that adjust and feature a rubber gasket for effective sealing against the drop ceiling
- To account for fans and controller units, chimney length for active containment should be sized by deducting 11.5" from distance between enclosure top and return ceiling
- Belden X Series enclosures equipped with containment top panels accept both passive and active chimneys, allowing for easy passive-to-active conversion

AEHC Overview

Belden's active Adaptive Enclosure Heat Containment (AEHC) System is a highly efficient and cost-effective method for cooling enclosures while preventing the mixing of hot and cold air in the data center. When networked, AEHC chimneys allow aggregation of exhaust air volume of entire enclosure pods, enabling real-time control of CRAC units and creating a logical link between the cooling plant and the computing load. This unique attribute allows reduction of cooling-operating costs, particularly in virtualized, clustered computing environments characterized by highly dynamic computing loads.

- AEHC uses high-capacity fans controlled by a pressure sensor to ensure dynamic balancing of intake and exhaust air volumes
- Maintains neutral pressure in the enclosure plenum for highly efficient server fan operation
- Can be networked in a pod/row for redundancy in virtualized, clustered computing environments
- Multiple enclosures can share AEHC chimneys based on hosted computing density (three enclosures per chimney is typical)
- AEHC is highly scalable with chimneys added as needed with increased computing loads
- A pair of hot swappable brushless fans with a combined capacity of 10, 20 or 30kW connect to the AEHC controller, enabling quick and easy capacity upgrades (different capacity fans cannot be used in the same enclosure)
- Fan motors are engineered to ensure longevity, high air displacement and low power consumption for mission-critical facilities
- Ideal for existing data centers, and non-Belden enclosures can be retrofitted with chimney by using a customized adapter plate

Heat Containment Systems (continued)

Pressure-based containment control for best use of cooling capacity

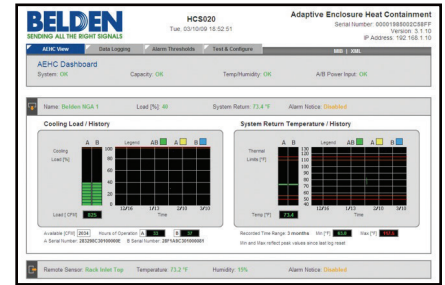

Rear View of AEHC Contained Enclosure

- The AEHC system is powered (autosensing 120 or 208V) via the enclosure PDUs and accepts two distinct power feeds for redundancy
- A combination of temperature-humidity sensors with AEHC controller can collect and store environmental data. When networked, real-time data can be accessed via the intuitive user interface or Belden Cormant-CS Infrastructure Management Software using SNMP (MIB file)
- Environmental, mechanical and electrical thresholds and alarms are easy to configure and can be sent directly to e-mail addresses (through an escalation process)

Belden AEHC Is Comprised of:

- An enclosure configured to accept the AEHC system
- A chassis with controller and two fans
- A controller for power input and system networking and control
- A pair of AEHC fans per chassis with a combined containment capacity of 10, 20 or 30kW
- A pressure sensor for fan speed control
- A dual-function temperature/humidity sensor to monitor intake air
- An AEHC chimney to provide the physical link between the chassis and return plenum

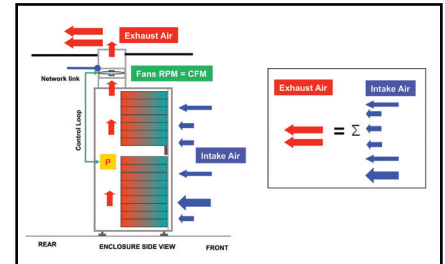

Embedded software allows each AEHC unit to be fully autonomous. The AEHC controllers have their own IP address, enabling network connection. The AEHC then allows for real-time monitoring of the heat load, temperature and alarm conditions for each IT enclosure.

The threshold setting in Belden's AEHC system software provides early warning alarms for problem conditions. Alarms are automatically reported. Supported Network Protocols: DHCP, HTTPS, SMTP/POP3, HTTP, ICMP, TCP/IP, SNMP, DNS.

AEHC Row Function Diagram

AEHC Single Enclosure Diagram (Side View)

AEHC Controller

Intelligent hot swappable fan cartridges allow for ease of maintenance and system scalability.

Belden's AEHC System utilizes pressure sensing to dynamically adjust for speed, resulting in perfect balance between intake and exhaust air volume.

XNM Series – NEMA-12 Enclosures

Ideal for use in industrial networking

Applications

Designed for dusty environments, Belden XNM enclosures allow hosting of networking/control equipment in factories, warehouses and on the production floor. Optional air conditioning AC units allow temperature control for stand-alone applications. Belden has extensive NEMA-style networking enclosure experience and capability to customize products-solutions.

Design and Structural Features

- NEMA 12 compliant for hosting servers and switches in industrial environments
- Free standing welded frame with modular construction
- 84"H x 29"W x 40"D
- Mounting rails are adjustable to either 19" or 23" EIA spacing
- Three-point compression-style lift-and-turn latch system
- Glass front door uses scratch-resistant tempered safety glass

XNM Style NEMA-12 Enclosure with Front and Rear Doors, Side Panels, EIA Mounting Rails and Optional Side-Mounted Air Conditioning Unit. Part No. shown: XNM84-3-11212.

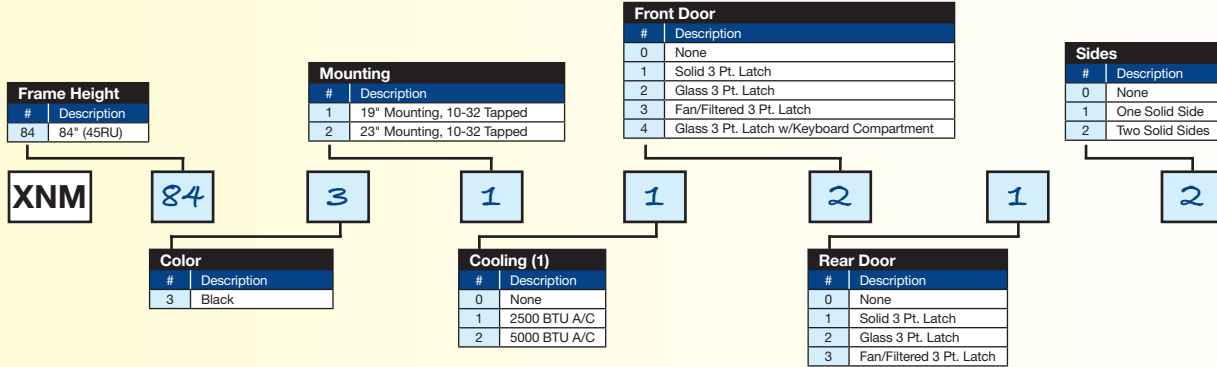

XNM Front with Doors and Panels

C Series Enclosures

Multi-use enclosure balancing performance and value

Highly versatile, cost-efficient 19" mount enclosure provides quality solutions for a wide variety of IT, Security and Data Center applications. Perfect for both stand-alone or ganged configurations.

Features

- Available in:
 - 600 and 800 mm width options
 - 1000 and 1200 mm depth options
 - 42RU height
- 1,980 lbs static load capacity
- Lightweight and strong
- Manufactured with premium-grade hot and cold rolled steel sheet
- Contoured high-density perforated quick-release, field-reversible doors
- Two-piece side panels provide convenient access to installed equipment in stand-alone applications
- Standard 19" mount per EIA -310D
- Fully adjustable mounting rail depth
- Rack unit (RU) identifier printed on mounting rails for quick identification
- Open bottom for easy cable access
- Top panel with rear brush opening
- All materials RoHS compliant

Standard Configuration includes

- Black powder-coat paint
- Perforated front door with lock handle
- Split perforated rear door with lock handle
- Four EIA mounting rails, cage nut style with M6 hardware included (50 pieces)
- Cable routing opening in mounting rails (only for 800 mm wide enclosure)
- Two solid side panels
- Top panel with brushed openings
- Open bottom
- Two rear cable lacing/PDU mount panels
- Casters, levelers and ganging kit/hardware included
- Grounding provision front/rear and top/bottom
- Bonding wires between frame and doors
- For shelves and horizontal managers
- see pages 64–65
- For PDUs see pages 69–76

Brushed Top Panel Opening

(2) Rear Cable Lacing/PDU Mount Panels

Cable Routing Opening in Mounting Rails for the 800 mm Wide Enclosure

C Series Enclosures (continued)

Available in 600 mm (23.6") and 800 mm (31.5") width options

XWM Series – Wall Mount Enclosures

Wall Mount Enclosures are an ideal hosting option in confined spaces

Applications

Wall mount enclosures provide IT/Networking hosting in spaces that often serve another primary function, and where space optimization is critical. They are designed for applications that require secure hosted devices and are ideal for locations where floor mounting space is limited, as is common in retail establishments, schools and offices.

Available in mounting unit increments of 9RU, 12RU and 20RU, Belden Wall Mount Enclosures offer great aesthetics, rugged construction, optimized equipment access and flexible cable management and access features.

Design and Structural Features

- Sturdy welded steel construction
- Durable black powder-coat finish
- Front door options: vented, smoked Plexiglass or solid front
- Door swing direction is field reversible
- Lockable front door, sides and rear section
- Open rear section for cable access through mounting wall
- Top and bottom holes in rear section for conduit connection and cable access
- Comes with mounting template for quick and easy wall mounting
- Removable sides for improved access (12RU and 20RU only)
- Two pairs of 12-24 tapped 19" EIA depth-adjustable mounting rails (includes mounting hardware)
- Swing-out mid-section for rear access to equipment
- Vented front (Plexiglass door only), sides, top and bottom panels for proper heat dissipation
- Top and bottom panel allow optional 4" fan mounting

2- and 4-Post Distribution Rack Systems

Modular High Density Racking System (HDRS) for network cross-connect

Applications

These high-reliability products have been designed specifically for networking environments – from Telecom closets to world-class Data Centers – to help you make the best use of valuable real estate and simplify MACs (Moves, Adds and Changes).

The HDRS is a well-engineered cross connect and hosting platform that offers you a high level of versatility and flexibility in systems design for ultimate network density and manageability.

How It Works

Create exactly the racking system you need from our selection of steel and aluminum distribution and server racks, combined with more than 50 standard cable management components and accessories. These items have been designed for complete compatibility and integration. The components include:

- Distribution and server racks in aluminum or steel; knockdown or welded; 2 or 4 posts
- Choice of low- or high-density vertical cable managers in single- or double-sided configurations
- High-density vertical manager half door allows easy cable access and hinging of the doors to both right and left side
- Horizontal cable managers with bend radius control and double-hinge cover
- **Accessories:** Retention Gates, Divider Bars, Transition Channels and more

How To Order

Select any of the Distribution and Server Rack styles. Select any of the Vertical Cable Managers listed for Distribution and Server Racks.

Choose any of the Accessories for the BHV Vertical Managers, Horizontal Managers or Transition Channels (See pages 44–45 for Technical Specifications and Options Tables).

2- and 4-Post Distribution Rack Systems (continued) High-Density Racking System Features

Vertical Manager Part Sets

- Includes a complete set of necessary components, including doors (on high-density managers), gates, push-in fasteners, cable strap mounts, cable retainer bars and mounting hardware

Modular, Removable Finger Sections

- Available in high or low density, finger sections can be easily removed during reconfigurations and easily replaced as needed
- High-density 11RU sections easily screw into vertical managers and align with the rack units, eliminating horizontal managers

System Scalability

- The HDRS is easily reconfigured and modified to handle future system growth, add-ons or changes

Compatibility of Vertical Managers

- Compatible with any EIA-310-D compliant 2- and 4-post racks

Mixed Media Application

- Designed to handle both copper and optical fiber structured cable networks

Accessory Mounting Holes

- 1/4" diameter mounting holes along length of each vertical manager enable easy attachment of accessories, like cable bundle fasteners

Any-Point-to-Any-Point Routing Capability

- Cable can be easily routed from one patch panel to another within the same rack, to the back of the rack or to an adjacent rack, while still maintaining proper cable bend radius

Easy Installation

- Only standard hand tools are required for quick installation and simple field reconfiguration and modification

Great Aesthetics

- Professional flat-black finish is suitable for any world-class telecom environment
- Central Office white color option allows for seamless integration where light-color enclosures are used, improving visibility

Unmatched Density

- Designed to work seamlessly with Belden IBDN copper and fiber systems, cable management fingers align with rack RUs for easy routing of patch cords to vertical managers, eliminating the need for horizontal managers

High Level of Modularity

- Enables ease of removal or reconfiguring Belden's wide selection of accessories and components
- Interchangeable cable retention gates, doors, fingers and accessories adapt to specific needs

Faster.
Easier.
Better.

2- and 4-Post Distribution Rack Systems (continued)

Suitable for single-rack to multi-rack high-density cross-connect

Applications

Belden offers a complete line of open racks and rack accessories from single-rack applications (Retail, Telecom closet) to high-density, multi-rack patching and switching fields (Computer Room, Data Centers, Central Offices). Belden's unique cable and connectivity expertise was central in the design of a feature-rich racking system that offers ease of installation, ease with MACs and is highly scalable.

Rack Features: 2- and 4-Post

- EIA-310 compliant, choice of 19" and 23" mounting
- Consult customer service for 23" rack and accessories (horizontal managers)
- Equipment mounting hardware is included
- 2-post rack uprights are front and rear tapped
- Easy rack unit identification for faster install
- Grounding stud standard on all 2-post and 4-post racks
- Steel or aluminum construction
- Seismic certified options
- Knockdown or welded construction
- 4-post racks are adjustable, providing for 28", 32" and 36" depths

Color

- Black (Standard)
- Central Office White available on request

XWR and XWB Series – Wall Mount Racks

Hinged and swing-out for rear access in tight spaces

XWR-1219 Wall Mount Rack in Hinged Style
(shown in closed position with equipment mounted)

XWB-2U 2RU Wall Mount Bracket

XPE-S0001 1RU rack attach to basket tray

Wall Mount Racks are available in two styles: hinged and swing-out. The hinged rack is 12" in height and features an adjustable lower shelf (adjusts 2" to 6"). The swing-out rack is available in heights of 36" and 48" with 19" mounting rails. 2RU, 4RU and 6RU Wall Mount Brackets are also offered for mounting a limited number of components or pieces of equipment.

XSW Series – Swing Rack

Free-standing swing-out rack used where space is limited

The Swing Rack provides easy access to the rear of rack mounted equipment in a free-standing environment. It is ideal for applications where space is limited and rear access is essential.

- Rack can be assembled as a left or right hinge and open 90°
- Rack can be positioned as close as 7" from wall
- Equipment up to 18.5" deep can be pivoted
- Cable management allows for cable routing without interference of the swing rack
- Racks can be bolted side-to-side
- Friction lock prevents rack movement while servicing

Engineered for Performance and Ease of Installation for Broadcast, Audio Video, Security, Head End and Mobile Telecom Applications

Belden offers four series of **high-quality enclosures and racks** for your unique Entertainment, Security, Head End and Mobile Telecom applications.

Belden has designed its Broadcast, Audio Video and Security Rack/Enclosure Series using the same top-quality and user-friendly principles that go into all of our market-leading solutions.

These uncompromisingly strong and well-built structures are combined with component features that optimize cable performance and provide extraordinary flexibility in cable management. These features provide a unique approach to equipment housing and storage needs.

The following pages detail the breadth of our rack/enclosure offering for the Entertainment, Security and Broadcast industries. In addition, Belden offers a complete array of shelves for 19" mount racks and enclosures, including cantilevered, 4-point mount, sliding and keyboard-type shelves.

Easier.
Better.

Advantages in Using Belden Broadcast Enclosure and Rack Series

Construction

- Welded frame construction for greater strength and structural integrity is standard on all broadcast racks and enclosures

Accessories

- A full complement of accessories will outfit your enclosures with the needed mounting, shelving, work surface and cable management support

Ease of Installation

- EIA rails are marked with rack space increments for ease of equipment mounting

Cable Management

- Numerous top and bottom entry points simplify cabling
- The rounded, steel-formed cable tie bar (Photo A) reduces pressure points
- The multiple attachment points for our Quick Mount System – or Nylon ties along the mounting rails, rail supports and cable tie bar (Photos B and C) – provide the utmost flexibility in cable routing and lacing
- The Quick Mount fastening system (Photo D) is comprised of a unique swivel base and base fastener. Velcro ties are easily threaded through the fastener base, allowing the cable bundles to be secured to the rack. The system's swivel base allows for a 90° angle between the cable bundle and the cable tie to allow pressure distribution along the cables

Aesthetics

- Powder coating process provides a textured black finish for a highly resistant, high-end look that showcases your equipment
- Aesthetics can be tailored to your requirements with a variety of doors, panels and customized silk screening options

Temperature Control

- Perforated and vented doors, along with a variety of top panel options, provide flexible cooling options

Power Distribution

- A complete line of Belden power distribution units, including rack mount and vertical mount options, can be found on [pages 69–76](#)
- Grounding studs allow for integral grounding of enclosures and accessories

Seismic Rating

- XME and XMER Series include NEBS seismic rating when anchored with optional seismic anchor bracket kit

The enclosure shown here is the XMER Style (Media Enclosure)

EIA Rail Kits

Side Panels

Top Panels

Doors

Advantages in Using Belden Broadcast Enclosure and Rack Series (continued)

Features and Benefits

EIA Rail Kits

- Rails are made of 12-gauge steel (XSF uses 16-gauge steel)
- Use standard EIA-310 hole-pattern (10-32 or 12-24 tapped holes)
- Fully adjustable depth; designed to be moved without need to remove rail support hardware
- Mounting hardware supplied with rack
- A series of lacing holes along the rails allow for the easy attachment of cables. Holes are also compatible with our Quick Mount fasteners
- RU marking on all rails facilitates equipment mounting
- RU marks are hidden once the equipment is mounted

Side Panels

- The tool-less surface-mounted side panels are quick and easy to install
- Flush version side panels (available only on the XMF Series) can be installed in between joined racks (heat barrier) or end-of-row units without any additional floorspace requirements
- Panels can be used to transform a rack into a free-standing enclosure or to close a row on ganged racks (enhancing the installed look and providing added security)
- Feature lifting handles for easy panel removal

Top Panels

- Solid tops prevent dust from entering the enclosure
- Vented tops allow for convection cooling
- Solid top with 10" (550 CFM) fan for forced hot air evacuation
- Solid top with four 4" (320 CFM), low noise fans for forced hot air evacuation

Doors

- Rugged and rigid construction
- Doors mounted with lift-off hinges are capable of 180° swing, even when enclosures are ganged
- Door swing is field reversible
- Glass door uses anti-static tempered glass, allowing easy cleaning, rigidity and high-end look
- Perforated door features 63% mesh opening allowing for minimal air resistance for optimized cooling
- High-quality swing latch includes locking mechanism

Side Cable Chase

(Available on XMER Series)

- Adds 4" of valuable cable management space
- Can be mounted to the side of the enclosure and is compatible with the side panels – or can be mounted in between the enclosures to share cable management space

Base

- 4" riser base allows for easy cable routing from rack to rack
- Available in XMF Series: gangable 1-, 2- and 3-bay bases with easy-to-use anchoring holes
- Series of mounting holes allow rack to be secured using common nuts and bolts
- Feature power outlet mounting openings with cover plate
- Includes mounting hardware and grounding stud
- Multi-rack riser bases to meet your specific space requirements (length, height) are available on custom basis

Recessed Caster Base

- Allows for easy positioning of the rack
- Installs directly to bottom flanges of enclosure
- Recessed casters allow the leveling legs to be lowered when the enclosure is in position and raises the casters off the floor
- Includes hardware

Rack Mount Drawer

- Convenient sliding storage drawers
- 16" deep with lock
- Available in four heights

Front Mount Work Surface

- Provides a convenient work surface
- 16" deep, single-bay (22") and double-bay (44") width

Easier.
Better.

Advantages in Using Belden Broadcast Enclosure and Rack Series (continued)

Features and Benefits

Vertical Lacing Bar

- 1" wide vertical lacing bar is supplied with mounting hardware
- Mounts to the rail supports; fully adjustable depth
- Series of lacing holes are compatible with Belden Quick Mount fasteners to provide flexibility in cable routing

Vertical Lacing Panel

- Mounts to the rail support
- Fully adjustable depth
- Panel is 3" wide and features multiple lacing points
- Ideal for attaching cable bundle

Power Distribution Units

- Extensive offering
- Includes monitored and IP-based smart PDUs
- Climate monitoring option available

(See page 78)

Grounding Provision

- Belden racks are provisioned with grounding studs, enabling integral grounding of rack and accessories
- The copper vertical ground bar mounts to the rack support
- Fully adjustable depth
- Bar is 3/4" wide x 1/8" thick

Quick Mount Fasteners

- Velcro hook and loop with cable tie mount and fasteners provide a quick, flexible way to route the cable bundle within the rack
- Racks are designed with multiple attachment holes (rails, rail supports) for flexibility, ease of installation and to protect cable integrity

Shelves

- Broad selection for 19" mount racks and enclosures
- Cantilevered, 4-point mounted, sliding and keyboard styles

XSF Series – Slim Frame

Light and customizable frames for Broadcast Trucks and Mobile Telecom

XSF Series Racks in ganged arrangement

Part No. shown here: XSF473010000
(47RU H x 19.19"W x 30"D)

Applications

The ultra-slim XSF frame has been designed to minimize the footprint for installation and use in mobile TV trucks. The narrow 19.19" width will accommodate standard 19" mount equipment. The frames gain strength when ganged together in a series.

Design and Structural Features

- Available in 14 heights and 3 depths
- 11-gauge steel, one-piece formed top and bottom; 11-gauge steel formed vertical corner posts
 - 20.5" (10RU) to 87" (48RU) Height x 19.19" Wide x 18", 24" or 30" Deep
- Optional aluminum, weight-saving version available on request
- Front corner post contains EIA-310 hole pattern: 10-32 or 12-24 tapped
- Rail support channels are 16-gauge steel, riveted and welded in place

Ease of Installation

- One pair, 16-gauge steel EIA rails, moveable front to rear in .62" increments
- Each frame is supplied with 10-32 or 12-24 clip nuts for attaching equipment to the rails
- Holes in side flanges of each corner post are available for ganging purposes
- Open bottom with hole pattern to bolt frame to floor; captive grounding studs in bottom sills

Color

- Black durable powder coat

Quick Mount with Fastener, 10 Pieces	XMFCTM

XMF Series - Media Frame

Flexible cable management in a narrow frame for Broadcast Studios

Part No. shown here: XMF4424100000TB
(44RU H x 22" W x 24" D)

Part No. shown here: XMF4424102140
(44RU H x 22" W x 24" D)

Cable Management

- Numerous lacing points on two surfaces of each rail support
- Cable tie holes span entire length of EIA rail on the attachment flange (spaced at 1.75")
- Unique cable tie bar is made of formed steel to eliminate sharp edges; provides multiple attachment points; features cable bend radius control and lacing holes; factory mounted when tie bar option is selected

Design and Structural Features

- Available in 26 heights and 4 depths for versatility in designing studios or production facilities
- 11-gauge steel corner posts; 11-gauge formed top and bottom members; 14-gauge formed rail supports
 - 22.25" (11RU) to 103" (57RU) Height x 22" Wide x 24", 30", 36" or 40" Deep
- (4) 12-gauge EIA mounting rails (10-32 or 12-24 tapped)
- Frame is provisioned to accept optional front and rear doors, side and top panels
- **Reversible Doors:** Surface mount solid, 16-gauge doors or top and bottom vented styles
- **Side Panel:** Solid, 16-gauge flush side panel or 1-piece formed surface mount panel; surface mount panels add 1/2" per side to overall width
- **Top Panel:** Solid, vented or with 10" fan
- **Vertical Spacing Panel:** Easy-to-install; 2.75", 3.66", 4.40" and 5.50" widths; 11RU-57RU heights
- **Riser Base:** 4" height, 1-3 bays; fully-welded, gangable; power outlet openings with covers; anchoring holes supplied to ease installation
- **Caster Base:** Recessed; 20", 30", 36" and 40" depths; adds 2.5" to frame height; caster bases install directly to bottom flanges of enclosures; casters are recessed, enabling leveling legs to be lowered when enclosure is in position, allowing the casters to be raised off the floor
- **Rack-Mount Drawers:** 16" deep sliding storage drawers with lock; available in four heights; mount on EIA rails (mounting hardware included); compatible with all 19" mount racks

Ease of Installation

- Frame is provisioned for attaching a tool-less, formed surface mount side panel or a flat, flush panel. Flush side can be installed between joined enclosures without any additional floorspace
- Vertical spacing panels add cable management space between racks; includes two panels with attachment studs; panel features lifting handles
- Open top with optional configurable panels
- Open bottom with hole pattern to bolt frame to floor or a raised base; captive grounding studs in bottom sills
- Ganging can be done after equipment is placed in rack

Color

- Black durable powder coat

XME Series – Media Enclosure

Cost effective and efficient design for Broadcast, Commercial AV and Security applications

Design and Structural Features

- Available in four heights and two depths
- 16-gauge, one-piece formed and vented sides; 16-gauge formed bottom and top
 - 48.87" (24RU) to 83.87" (44RU) Height x 22" Wide x 20" or 26.5" Deep
- Top and bottom EIA rail support channels are an integral part of the top and bottom; formed center rail support channels are spot welded to the sides
- Two 12-gauge EIA mounting rails (10-32 tapped); additional rails can be added (optional)
- Front and side ventilation for convection cooling
- Stand-alone or gangable, with integrated side panels
- **Reversible Doors:** Frame is available with optional front and rear solid, glass or perforated surface mount doors
- **Top Panel:** Solid, vented, with 10" fan or (4) 4" fans; depths of 20 and 26.5"
- **Caster Base:** Recessed, depths of 20" and 26.5"; adds 1" to height of frame; casters are recessed, allowing leveling legs to be lowered when enclosure is in position, allowing casters to be raised off the floor
- **Rack Mount Drawers:** 16" deep sliding storage drawers with lock; available in four heights; mount on EIA rails (mounting hardware included); compatible with all 19" mount racks

Cable Management

- **Rear Access** – Top: three antenna knockouts, each .62" dia. two conduit knockouts, .87" dia. and 1.12" dia. 9" x 2.25" opening with cover plate. Bottom: 4 conduit knockouts, two @ .87" dia., two @ 1.12" dia. 9" x 2.25" opening with cover plate
- **Side Access** – Top: 4" dia. knockout, located toward the rear. Bottom: 4" dia. knockout, located toward the rear. Optional edge guard to protect the cable is available
- **Top Access** – 1", 1.5" and 2" knockouts, located toward the rear of top panel
- Cable tie holes span entire length of EIA rail on the attachment flange (spaced at 1.75")
- Fully open top and bottom facilitate cable routing

Ease of Installation

- Partially open top with optional configurable panels; rear of top contains various electrical knockouts for cable entry
- Open bottom with leveling legs and hole pattern to bolt frame to floor, captive grounding studs in bottom sills
- Ganging can be done after equipment is placed in rack

or 36"

22"

Part No. shown: XMER4431320
(44RU H x 22" W x 31.5" D)

Design and Structural Features

- Available in four heights and three depths; taller units (48RU, 50RU and 52RU) available on demand
- 14-gauge, one-piece formed top and bottom; 16-gauge formed vertical corner posts
 - 48.87" (24RU) to 83.87" (44RU) Height x 22" Wide x 26.5", 31.5" or 36" Deep
- EIA rail support is integral part of the top and bottom with spot-welded inner support channel
- Middle rail support channels are spot-welded construction of two 16-gauge formed rail channels, creating .12" thick support channels per side
- (4) 12-gauge EIA mounting rails (10-32 tapped)
- **Reversible Doors:** Frame available with optional front and rear solid, glass or perforated surface mount doors
- **Side Panels:** Surface mount removable side panels, adds 1/2" to overall width
- **Top Panel:** Solid, vented, with 10" fan or (4) 4" fans; depths of 26.5", 31.5" and 36"
- **Side Cable Chase:** 4" wide chase for added cable management; can be mounted between enclosures or used as side unit; will accept a side panel (44RU enclosures only)
- **Caster Base:** Recessed, depths of 26.5", 31.5" and 36"; adds 1" to frame height. Caster bases install directly to bottom flanges of enclosures; casters are recessed, allowing leveling legs to be lowered when enclosure is in position, and casters to be raised off floor

48.87"
83.87"

Cable Management

- **Rear Access** — Top: three antenna knockouts, each .62" dia. two conduit knockouts, .87" dia. and 1.12" dia. 9" x 2.25" opening with cover plate; Bottom: four conduit knockouts, two @ .87" dia., two @ 1.12" dia. 9" x 2.25" opening with cover plate
- **Side Access** — Top: 4" dia. knockout, located toward rear; Bottom: 4" dia. knockout, located toward rear; optional edge guard to protect the cable available
- **Top Access** — 1", 1.5" and 2" knockouts, located toward rear of top panel
- Lacing points on two surfaces of each rail support facilitate cable management
- Cable tie holes span entire length of EIA rail on attachment flange (spaced at 1.75")
- Cable tie bar made of formed steel, eliminates sharp edges; provides multiple attachment points; features cable bend radius control and lacing holes; factory mounted when tie bar option is selected

Ease of Installation

- Open top with optional configurable panels
- Open bottom with leveling legs and hole pattern to bolt frame to floor; captive grounding studs in bottom sills
- Ganging can be done after equipment is placed in rack

Color

- Black durable powder coat

Faster.
Easier.
Better.

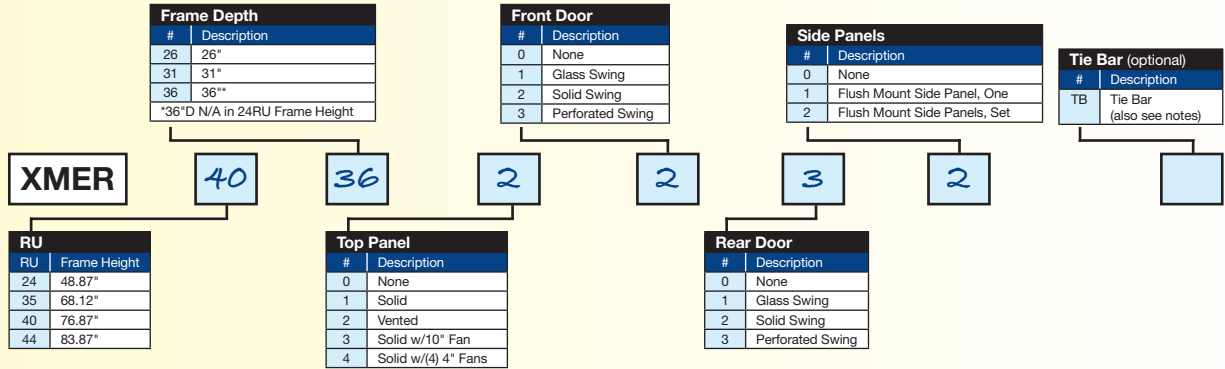

Ordering Matrix for XMER Series

Part number example:

XMER40362232

XMER Enclosure, 40RU height, 36" depth, with vented top panel, solid swing front door, perforated swing rear door, and two solid side panels.

Notes:

- 1) Tie bar option (TB) 24RU=8TB, 35-40-44RU=12TB.
- 2) 19" rack mount PDUs will work on all XMER Enclosure heights.

XMER Series – Options and Accessories

Refer to RU and FRAME DEPTH charts (above).

Top Panel Options

Door Options

Compatible with enclosure front or rear.

Side Panel Options

Solid removable (single).

Large Selection of Rack and Enclosure Accessories to Meet Equipment Mounting, Cable Management, Grounding/Bonding and Access Control Challenges

Components and accessories designed for seamless compatibility with Belden racks and enclosures products.

- Cantilevered and 4-point mount shelf mounting options for non-rack mount components
- Organize and manage patch cords and cables with horizontal managers available in multiple sizes and capacities
- Optimize air separation for improved availability with solid and brushed filler panels
- Ensure installation security and electrical conformance with bonding and grounding products
- Meet active equipment mounting requirements with multiple mounting hardware products
- Access control for enclosures protects your physical assets and data

Remotely manage server access

while maintaining an indisputable audit trail with Belden Enclosure Access Systems.

Enclosure Shelves 19" Shelves

9010-1924

9012-1918 and
9012-1918-16

Features

- Compatible with 19" mount enclosures and racks (23" mount option available on request)
- Available in depths of 12" to 36" cantilevered or 4-point mount types
- Shelves include mounting hardware
- Load ratings range from 25 lbs to 200 lbs
- Standard shelf color is black (other colors are available on custom basis for volume orders)

Horizontal Cable Management

Application

Horizontal managers allow routing of copper and fiber cables/patch cords in racks and enclosures while helping to maintain proper bend radius and organize array for ease of moves, adds and changes.

Features include:

- 1RU to 4RU height
- 19" mount includes mounting hardware
- Compatible with racks and enclosures
- Selection of ring, finger and cable tie bar style horizontal managers
- Standard color is black (other colors available on volume orders)

Steel Filler Panels

Plastic Filler Panel

XFPWB2U101
Brushed filler panel allows routing of cable from front to rear while providing air flow separation. Panel is open ended, allowing mounting without having to unplug cables.

Filler Panels

Application

- Filler Panels allow blocking of unused rack units (RU) for optimized airflow and separation between cold supply air and hot return air
- Best practices in Data Centers includes blanking of all unused rack units (RU)
- Filler Panels are compatible with 19" mount racks and enclosures

Description	Color	Belden Part Number

Grounding and Bonding

Options

Description	Belden Part Number
19" Horizontal Isolated Copper Ground Bar, .25" Thickness x 1" W, Tapped 10-32	9714-0190
Grounding/Bonding Strap Kit (11" strap with hardware)	XBS-11-0001
Grounding/Bonding Strap Kit (18" strap with hardware)	XBS-18-0002
Grounding/Bonding Strap Kits	
Bonding Strap Kit (11" strap with hardware and anti-oxidation compound)	XBS-11-0001
Bonding Strap Kit (18" strap with hardware and anti-oxidation compound)	XBS-18-0001
Grounding Lug Kit (Ground Lug and 1/4-20 Kep Nut)	20128-KIT

Notes:

Bonding strap kit is included with enclosure doors, sides and top panels.
Grounding lug kit is for use with rack and enclosure welded ground studs.

19" mount grounding bar is 0.25" thick x 1.25" wide, with #10-32 tapped holes; isolating mounts with hardware are included.

Mounting Hardware

Application

Included adjoining hardware for ganging of racks and enclosures, plus a variety of bolts, screws and nuts for mounting of active and passive networking devices into enclosures and racks.

Note:

Adjoining hardware is included with the enclosures.

Enclosure Access Systems

Access control with authentication done at each enclosure

Access control with authentication done at end of row of enclosure

8815-0210 BUS Enline Reader w/PIN and Fingerprint

iClass Card, Biometrics and E-Lock Handle Options

Application

Physical assets protection/access is key to IT operations, such as Data Centers, Enterprise and Remote Computing locations. Belden enclosures can be equipped with a variety of locking handles, including state-of-the-art enclosure access control and management solutions, allowing conformance to privacy rules and regulations (PCI DSS, HIPAA, FISMA and more).

Features

- Centralized administration of up to thousands of units
- Real-time monitoring and alerts
- Indisputable audit trails
- Enclosures or row/pod level access
- Flexibility to choose between fingerprint or RFID card access

Stand alone enclosure access systems are for smaller or distributed installations. Each cabinet has a dedicated controller and biometric (BioLock) or card reader (CardLock) used for user authentication.

In a networked enclosure access system, a central controller distributes control signals and power to up to 32 enclosures when authenticating at the enclosure level and 31 enclosures when authenticating at the end of row. For enclosure level authentication, choose between fingerprint (BioLock) or RFID card (CardLock). For end-of-row authentication, the user enters which enclosure door they are attempting to access, then uses any combination of PIN, RFID card and fingerprint to authenticate.

Power Availability, Distribution, Allocation and Monitoring are Critical Data Center and Broadcast Studio Requirements

Precisely distribute, monitor, analyze and manage power distribution in your facility to **maximize processing capacity** and promote power efficiency.

Belden in-enclosure mounted Power Distribution Units (PDUs) and Environment Monitors and Sensors are designed from high-quality components to support all your mission critical applications.

A key component of our Data Center Ready Solution (DCRS), Belden PDUs allow configuration of integrated and optimized hosting systems, including fiber/copper connectivity and cabling, enclosures, cable management and air flow management. They are designed to facilitate seamless integration into Belden enclosures and racks, and include multiple mounting options for maximized air flow and cable management in high-density servers or switch hosting applications.

Paired with our extensive line of environmental monitors and sensors, which include alarm thresholds, reporting functionality, and a built-in intuitive web interface for remote access, Belden has everything you need to precisely monitor, analyze and log key parameters, enabling you to identify current fluctuations and quickly troubleshoot potential problems.

*Lacing-PDU mounting panels (p.75) are not included with the enclosures or the PDU's and need to be ordered separately. PDU's/panels uses tool less "button" style mounting.

Enclosure Power Distribution Units (PDUs)

XN Series enclosures with end-of-row and in between 6" extensions

Organized networking and power cable management for proper server airflow

Side-by-side PDU mounting using 7" wide PDU mounting panel (Part No. XVMP024501)

Belden PDU Options and Features

- All Belden PDUs are UL and cUL listed 60650
- Select from a wide offering of PDUs designed to meet your specific power requirements; single phase, 3-phase (WYE and Delta configurations)

Power	Amp	Voltage	Phase	Plug
3.3kW	20A	250V	1 Phase	L6-20P or 2P, 3W
5kW	30A	250V	1 Phase	L6-30P or 2P, 3W
11kW	20A	230/400V	3 Phase WYE	L22-20P or 4P, 5W
16.6kW	30A	230/400V	3 Phase WYE	L22-30P or 4P, 5W
1.4kW	15A	125V	1 Phase	5-15P or L5-15P
1.9kW	20A	125V	1 Phase	5-20P or L5-20P
2.8kW	30A	125V	1 Phase	L5-30P
5.7kW	20A	120/208V	3 Phase WYE	L21-20P
8.6kW	30A	120/208V	3 Phase WYE	L21-30P
8.6kW	30A	250V	3 Phase Delta	L15-30P
17.2kW	60A	208V	3 Phase Delta	3P/4W
23kW	80A	208V	3 Phase Delta	Hard Wired
34kW	120A	208V	3 Phase Delta	Hard Wired

- Over 500 standard PDUs available to ship within 10 days of ordering, or custom PDUs available to ship within 20 days of ordering
- C-13 and C-19 receptacles with optional locking feature for mission critical applications
 - Unplugging cords requires simple "push" of release button
 - Locking mechanism binds to the ground pin on the plug and is compatible with standard IEC cord, thus eliminating the need for expensive proprietary cords

Locking Receptacles

Inside View of Locking Mechanism

Enclosure Power Distribution Units (PDUs) (continued)

PDU Selection: Basic, with Local Monitoring and Intelligent

- PDU mounted display option for local current or power monitoring, making phase balancing easier (the PDU itself is not phase balancing)

Intelligent PDU Options and Features

- Remote aggregate, circuit or receptacle power monitoring for granular PUE measurement
- Switched (on/off) options allow remote outlet management and equipment reboot with sequential delay features; avoid power interruption due to inrush current, equipment start up in desired sequence

- Highly secure access with admin, control and view-only accounts
- Intuitive Ethernet-based firmware with email alarm or SNMP trap features prevents downtime with early notification of power threshold breaches
- SNMP (MIB) enabled for compatibility with all leading DCIM packages
- Integrated environmental monitoring capabilities; monitor temperature, air flow, humidity and dew point via optional connected sensors
- Internal memory for up to two week of trending of critical parameters for clear understanding of power allocation and usage

*3-Phase power is calculated by multiplying single phase by the square root of 3 or 1.73.										
**Tons of air conditioning required to remove heat from associated IT load.										
***The volume of air that is typically required by the IT equipment for each kW of IT load can typically range from 80 to 140 CFM. 120 CFM was used for calculation.

Locking Cord Set*

*Built within the plug housing on the female end (C13/C19) of the cord, the patented integrated locking mechanism is protected against vibration and external elements that can easily dislodge other plug securing solutions, like external locking clips and guides. This self-contained locking mechanism engages with any standard IEC male connector (C14/C20). The cord locking feature is only available at the device-end of the cord sets. A power strip with locking receptacles must be available to secure these cords to the PDU.

What is 3-Phase Delta?

3-Phase Delta from 208V Source

A 3-Phase Delta is a 4-wire configuration consisting of 3-Phase conductors (X, Y and Z) and a Ground. Without the neutral present, only phase-to-phase wiring is possible. The potential between any 2-Phase conductors is typically 208V.

What is 3-Phase WYE?

3-Phase Delta from 120/208V Source

A 3-Phase Delta 120/208V WYE is a 5-wire configuration consisting of 3-Phase conductors (X, Y and Z), Neutral and Ground. The potential between any 2-Phase conductors is 208V. The potential between any phase and neutral is 120V. This configuration can be wired to provide 120V, 208V or a combination of both voltages within one PDU.

Power Distribution & Climate Monitoring

Environmental Monitors and Sensors

9318-0500

9318-0550

9318-0560

9318-0570

Applications

- Belden climate monitors and sensors allow precise monitoring/alarming of key environmental parameters for improved equipment availability in mission critical applications (Data Center, networking closet, remote locations)
- Built-in intuitive web interface for remote access via Ethernet browser
- Built-in and external sensor options (temperature, humidity, air flow, water detection, door position, smoke)
- SNMP-enabled for compatibility with leading DCIM package
- Recognize IP-based camera for space viewing
- Set alarm threshold, can be sent to up to five e-mail addresses
- Allows viewing of data graphs and analysis of historical logs
- Power supply included
- UL and cUL listed

Warranty and Shipping Policy

Warranty

Limited Warranty

Belden warrants that, for a period of one (1) year following the date of delivery to the original customer, the products it offers for sale in the catalog are free from defects in material and workmanship. The foregoing warranty is subject to the terms, limitations and conditions set forth below.

Liability

Belden's sole liability under this warranty will be to repair or replace, at its discretion, products that do not meet the specifications and descriptions provided in the catalog or purchase order due to defects in material and workmanship. Under no circumstances shall Belden be liable for any consequential or special damages for breach of this warranty. Belden's total liability under this warranty shall be limited to the price actually paid by the customer for the product(s) covered. Except as specifically set forth above, Belden expressly disclaims any other representation or warranties of any kind, expressed or implied, arising by law or custom, with respect to products set forth in the catalog or otherwise sold by Belden, including without limitation, warranties or merchantability, fitness for a particular purpose, non-infringement or any other matter.

Conditions of Warranty

This warranty applies only to standard products set forth in the catalog. Custom products are covered by warranties stated in the Terms and Conditions of Belden's quotation at the time of the order.

Repairs or Adjustments

Belden, at its discretion, will make any repairs or adjustments to any products that are due to defects and/or workmanship. This warranty does not extend to any items that upon inspection by Belden are deemed to have been misused, neglected, improperly treated, improperly installed, or used in violation of instructions or specifications approved by Belden, or otherwise handled, installed, shipped or used in violation of industry standards for metal fabrication and solid state electronic equipment.

Powerstrip Warranty

If a BELDEN power strip product becomes defective during the warranty period listed below, BELDEN will elect to either repair or replace the unit free of charge.

Basic Power Strips – Three Years

Metered, Monitored and Managed Power Strips – Three Years
Environmental Monitoring Units – Three Years

This warranty does not include damage to the product resulting from accident or misuse, including exposure to water or any other corrosive material. This warranty excludes damage to equipment if surge or spike reaches that equipment through an unprotected source connected to it (i.e., printer, modem, phone line, etc.). It shall not apply to any product, which has been connected, installed, used or otherwise adjusted other than in accordance with written instructions furnished by BELDEN.

WARRANTY WILL BE VOIDED IF THE UNITS ARE OPENED, MODIFIED OR ALTERED DURING THE WARRANTY PERIOD.

Containment and Cooling Warranty

BELDEN warrants Containment and Cooling products for a period of one (1) year following the date of delivery. If the BELDEN product becomes defective during the one (1) year warranty period, BELDEN will elect to either repair or replace the unit free of charge. This warranty does not include damage to the product resulting from accident or misuse, including exposure to water or any other corrosive material.

WARRANTY WILL BE VOIDED IF THE UNITS ARE OPENED, MODIFIED OR ALTERED DURING THE WARRANTY PERIOD.

Shipping Policy

Freight Handling Charges

Third-Party Billing – Customer will specify carrier. Freight will be third-party billed other than to Belden or the customer.

The customer will supply a third-party account number or third-party billing address.

Freight Collect – Customer to specify carrier. Either a freight account number is provided or freight charges will be paid at destination upon delivery.

Prepaid and Add – Belden will specify carrier which has contractual agreements with select carriers.

All freight charges that appear on initial product invoice will be paid by the customer, and will not require any additional freight documentation. Belden's billing cycle will only indicate on the invoice a freight charge from dock to dock. Any accessorial charges (e.g., lift gate, union driver) will be billed on an additional invoice other than the initial billing that will show the accessorial charges.

Shipping Policy

Belden will provide estimated freight charges and will not be liable for charges due to problems that may occur in transit or upon delivery or not known at the time of the initial quote (accessorial charges). All shipments leaving Belden are FOB origin.

Inside Delivery – A carrier driver will make an inside delivery if an adequate loading dock is available to roll off freight to a trailer level dock. The driver will be equipped to move the freight via hand truck or pallet jack and must be able to get to the inside destination without any problem of obstacles that would cause delays. The customer must supply a freight elevator if delivery requires it. This action may result in additional freight charges.

Lift Gate Service – Usually a lift gate is needed when a loading dock is not available. The freight is lowered to ground level and delivered to the customer's door "only." Not all trailers are equipped with a lift gate and most carrier terminals have a

limited number of lift gate trailers. This may cause a delay in shipment. This procedure may require an additional fee.

Notification – To coordinate delivery between the customer and the carrier, the customer must supply a phone number and contact person. This procedure may require an additional fee.

Re-Consignment – Once freight has left the Belden dock, the delivery destination address will be scheduled in the carrier dispatch system. A change of destination address is possible, depending upon the timing of delivery. This action may result in additional freight charges.

Redelivery – When a delivery is refused by a customer for any reason, other than the fault of the carrier, the freight will be returned to the carrier's dock. A redelivery charge will apply.

Damages

All damages must be reported to Belden within three (3) working days upon delivery. Failure to report any damages will release Belden from any and all claims. It is the responsibility of the customer's receiving personnel to check all shipping cartons for discrepancies (e.g., dents, punctures). All discrepancies to the shipping container should be noted on the carrier's paperwork and documented. If, after opening the container, it is found that there is damage to the product, the carton is to be examined to determine that the damage was due to shipping.

Failure to examine cartons at delivery, and signing the carrier's paperwork, releases the carrier and Belden from any and all freight claims.

Third-party billing customers will handle any and all freight claim damage with the carrier and are responsible for all freight charges.

Packaging

BELDEN enclosures are packaged in cardboard protective corner posts and protective plastic cover. The enclosures are then secured to a skid by banding prior to shipment.

Less than truck load shipments (LTL) may require additional packaging due to multiple handling locations. Belden provides full protective packaging (i.e. 3" honeycomb cardboard corner posts, honeycomb top cardboard cover, cardboard wrap, shock-watch drop spot indicator) for an additional fee to accommodate LTL shipments with special needs. Please contact your customer service or sales rep to discuss the packaging options.

Return Policy for Repair, Replacement, Modification or Credit

Prior approval must be obtained for any products being returned. Upon approval an RMA number will be assigned to the items being returned. This RMA number MUST appear on all shipping documents and on the outside of each carton. Failure to include the RMA number on the carton will result in the refusal of delivery and return to the customer, freight collect.

All products returned for reasons other than repair or replacement are subject to a 15% restocking fee and must be shipped prepaid. In addition to the 15% restocking fee, the customer is responsible for properly packaging and returning the product in reusable condition. If not, additional charges may be added to the restocking fee. If a customer holds a product for more than ten (10) days, a return for credit will be voided.

Any or all special customized products can only be returned for modifications or repair of damages.

All products being returned shall be prepaid (unless they are being returned due to defect or damage), packaged in good condition and shipped to:

Belden
2001 North Main Street
Washington, PA 15301

Belden Rack and Enclosure Manufacturing

State-of-the-Art Manufacturing and Assembly Operation

Lean Manufacturing

Belden's lean manufacturing philosophy is exemplified in its manufacturing plant, where infrastructure solutions, including racks, enclosures, heat containment and rack power distribution units, are produced. The plant is structured for cell-based manufacturing, where automated machines, such as the CNC punch press, CNC laser-punch combination machine and CNC CO₂ lasers, work seamlessly with semi-automated metal-bending machines and assembly operations.

Packaging and Shipping

In order to provide our customers with high-performance enclosure systems and just-in-time delivery, the factory process flow is based on a value stream map, with raw materials received at a receiving dock (close to fabricating cells) and finished goods shipped from a shipping dock (close to the packaging cell). All enclosures are shipped with unique serial number tags, enabling full traceability.

Environmentally Friendly Powder Coating

Belden's powder-coating process involves industry leading five-stage wash and pre-treatment steps, ensuring a lasting and durable finish. Each enclosure is baked in compliance with ASTM standards to prevent paint from scaling or chipping, thus ensuring rust-proof enclosures. The entire process is environmentally friendly, with complete conformance to both state and federal "Clean Air Act" guidelines.

Quality Inspection

The cell-based assembly process includes stringent quality checks at each location within the cell, which are tracked in an assembly check list by each associate assembling an enclosure system. Throughout this manufacturing process, the external quality, measured in defects per million, is less than 100. Lean daily management (LDM) and continuous improvement processes drive manufacturing and design philosophy at Belden to ensure each customer's quality and delivery expectations are met in a safety conscious work environment.

Fabrication

Precision CO₂ lasers with automated loading and unloading capabilities are at the heart of our sheet metal fabrication cell, with defect-free laser cutting at speeds up to 400 inches per minute. The parts are then sent through a continuous flow of metal forming, welding, powder coating and assembly cells.

Our modern manufacturing and assembly facility

ensures that customers receive the quality products they've come to expect.
